

# Example Page 1

This is a minimal example page demonstrating basic Observable Framework features. **Replace this with your own content.**

## Overview

This example demonstrates:

- Markdown formatting and structure
- Table of contents (enabled via frontmatter)
- Footnote citations for academic-style references
- PDF export capabilities

Observable Framework makes it easy to create professional documentation and reports<sup>[1]</sup>.

## Content Structure

You can organize your content with standard markdown headings, lists, and formatting.

## Features

- **Simple markdown syntax**
- **Live preview** during development
- **Static generation** for fast loading
- **PDF export** with custom styling

## Example Table

Feature	Status
Markdown support	✓
Interactive JavaScript	✓
PDF export	✓
Footnotes	✓

## Citations

When you need to cite sources, use markdown footnotes<sup>[2]</sup>. They appear at the bottom of the page in both web and PDF versions.

Multiple citations can reference the same source<sup>[1:1]</sup>, and you can have as many as needed.

## Next Steps

1. Replace this content with your own
  2. Add interactive visualizations with JavaScript code blocks
-

3. Configure PDF export settings in `pdf-export/config/config.json`

4. Build and deploy your site

See the **home page** for more examples, or check the **README** [<https://github.com/YOUR-USERNAME/YOUR-REPO-NAME#readme>] for complete documentation.
