

Observable Framework + PDF Export Template

Welcome! This is a minimal starter template demonstrating Observable Framework with PDF export capabilities.

Replace this content with your own - these example pages show what's possible and can be deleted once you're familiar with the system.

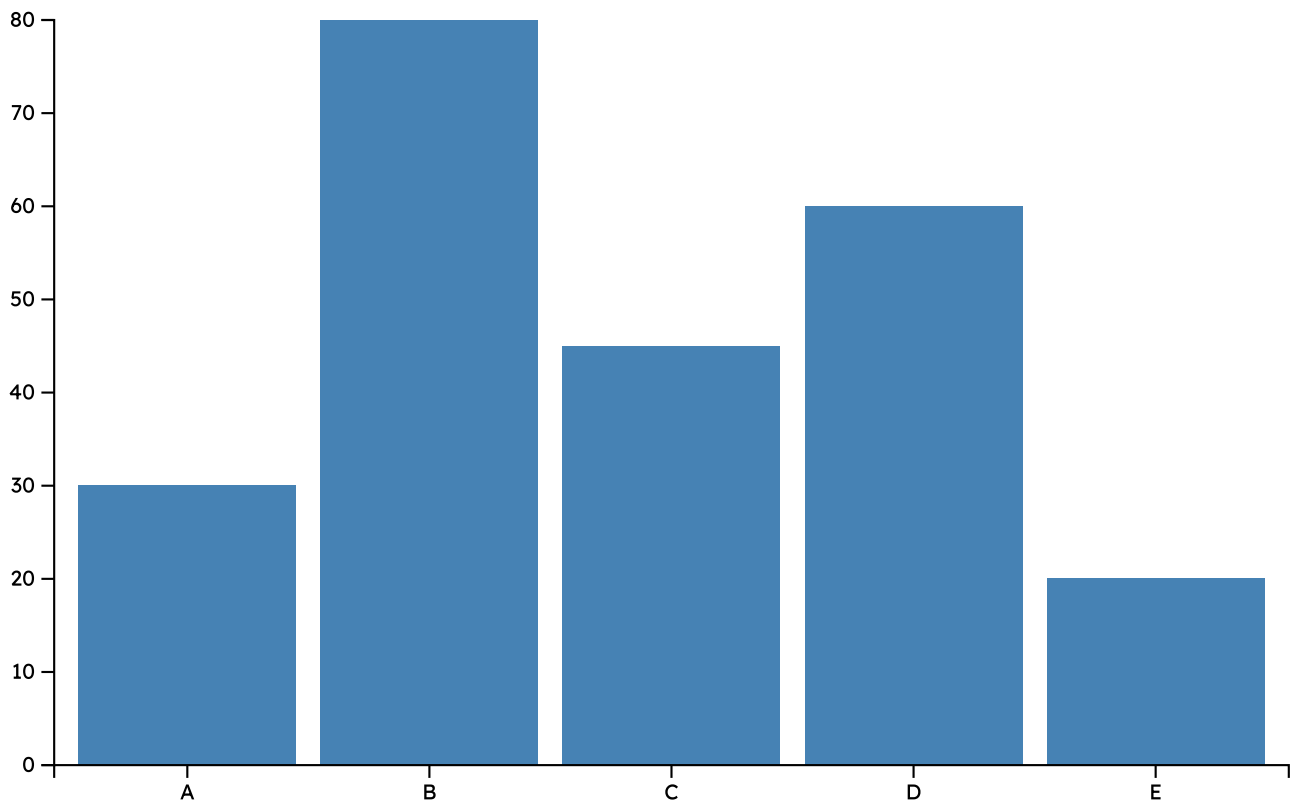

What This Template Provides

Create beautiful, interactive data reports and documentation:

- **Write in Markdown** with embedded JavaScript
- **Live preview** during development
- **Static site** generation for fast deployment
- **PDF export** with one command

Quick Example

Here's a simple interactive visualization to demonstrate Observable Framework's capabilities:

This chart is **interactive in the browser** and **renders correctly in PDF exports**.

Getting Started

1. **Explore** the example pages in the sidebar
2. **Modify** the content in `src/*.md` files
3. **Run** `npm run dev` to preview changes
4. **Build** with `npm run pdf:build` to generate PDFs
5. **Deploy** to GitHub Pages, Cloudflare, or any static host

Example Pages

This template includes three example pages:

- **Home** (this page) - Overview with basic visualization • **Download PDF**
- **Example 1** - View online • **Download PDF**
- **Example 2** - View online • **Download PDF**

Next Steps

1. **Customize** `observablehq.config.js` with your site title and settings
2. **Replace** these example pages with your own content
3. **Configure** PDF export settings in `pdf-export/config/config.json`
4. **Add** your data visualizations and analysis

See the **README** [<https://github.com/YOUR-USERNAME/YOUR-REPO-NAME#readme>] for complete documentation.

Built with **Observable Framework** [<https://observablehq.com/framework/>] • This content can be replaced with your own
