

Observable Framework + PDF Export Template

Welcome to this template for creating beautiful, interactive data reports that can be exported to PDF.

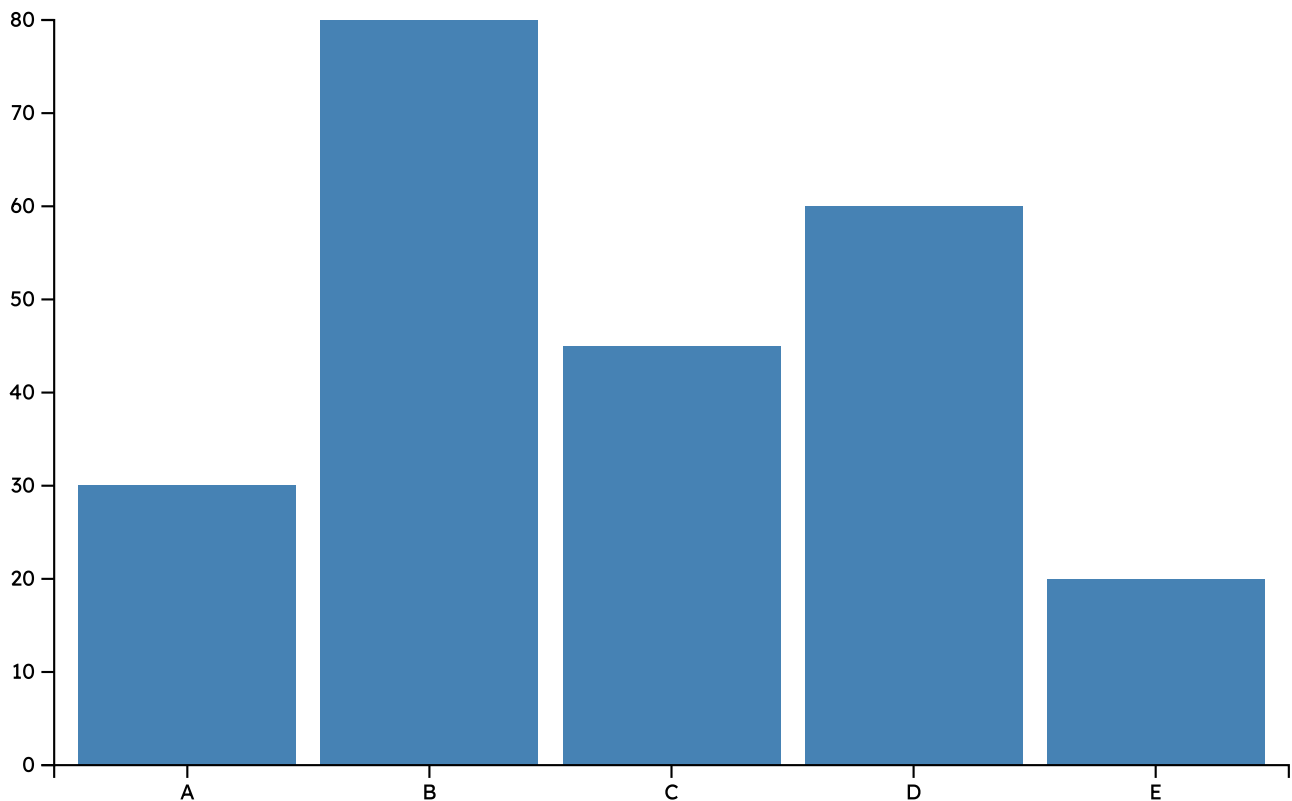

About This Template

This template combines **Observable Framework** [<https://observablehq.com/framework/>] with a custom PDF export system, allowing you to:

1. **Author content in Markdown** with live JavaScript and data visualizations
2. **Preview interactively** during development
3. **Build static websites** for deployment
4. **Export to PDF** with custom styling and formatting

Example Visualization

Here's a simple example using D3 to demonstrate Observable Framework's capabilities:

Getting Started

1. Install dependencies: `npm install`
2. Install PDF export dependencies: `npm run pdf:install`
3. Start development server: `npm run dev`
4. Build for production: `npm run build`
5. Export to PDF: `npm run pdf:build`

See the [README](#) for detailed documentation.

Template Pages

This template includes example pages demonstrating different use cases:

- **Home** (this page) - Overview with interactive visualization
- **Report 1** - Example report page with footnotes
- **Report 2** - Another example report page

Edit these pages in the `src/` directory to create your own content.
