

Example Report 1

This is a placeholder for your first report page. This example demonstrates basic Observable Framework features including markdown formatting, table of contents, and footnotes.

Introduction

Observable Framework allows you to create rich, interactive reports that combine narrative text with live data visualizations^[1]. You can write in standard markdown while embedding JavaScript code for dynamic content.

Key Features

Observable Framework provides several powerful capabilities:

- **Reactive programming** - Code cells automatically update when dependencies change
- **Data loaders** - Efficiently load and cache data from various sources
- **Beautiful defaults** - Professional styling out of the box
- **PDF export** - Convert your web pages to PDF with custom styling

Example Content

This is where your content would go. You can include:

- Analysis and findings
- Data visualizations
- Tables and charts
- Images and diagrams

The PDF export system preserves your content's formatting while applying print-optimized styling.
